FACADE FINISH · BRICK SLIPS

Meldorfer® brick slips

The Belgian range: 24 designs

Meldorfer® are not classic brick slips. They are thin mineral strips made of natural sand and minerals, dried rather than fired. They are about five times thinner and up to 80% lighter than a classic brick slip. That is why we bond them directly onto the external wall insulation, without anchors, with a pointed or glued finish. The result is a facade with the genuine look of brick, on an insulated home.

Beautiful
- Genuine brick look
- Any masonry bond possible
- Suitable for any facade

Sustainable
- Dried, not fired
- Smaller CO2 footprint
- Biocide-free

Practical
- Up to 80% lighter
- No anchors or heavy adhesive
- Thin build-up on insulation

Strong
- Frost-proof, non-combustible
- No cracking or fading
- Low maintenance

Sizes

Thin format (DF)	240 x 52 mm
Normal format (NF)	240 x 71 mm
Long format (LF)	400 x 40 mm
Extra-long format (XLF)	740 x 52 mm
Special format (SF)	300 x 135 mm
Large format (GF)	600 x 300 mm
Multi-format (MF)	300 x 52 / 71 / 135 mm
Free shape	made to measure

Corner strips and reveal pieces in the same brick.
Other sizes available on request.

Finish and joint colours

Pointed: the strips are laid with a visible joint, like classic masonry.

Glued: the strips are laid close together with a thin joint, for a sleek, modern facade.

Without head joints: a horizontal line pattern without vertical joints.

Three standard joint colours:

Anthracite · Sand white · Cement grey

A custom joint colour is also possible.

How we install Meldorfer® on your facade

1 Insulation
Grey graphite EPS is bonded to the facade.

2 Reinforcement
Mortar with glass-fibre mesh as a solid base.

3 Bonding
The strips are set in adhesive mortar.

4 Joints
Pointed or glued, in the joint colour of your choice.
